$n = 0.5$
$n = 0.7$
(a) $n' = h_p(n)$
(a) pn
(b) $h_p^{-1}(\hat{n}')$, p known
(b) $h_{\hat{p}}^{-1}(\hat{n}')$, $\hat{p}$ with 10% error
(a)
fitted $\hat{n}'$ (recorded incidents)
recording probability p
(b)
corrected $\hat{n}$
recording probability p
(c)
RMSE of corrected $\hat{n}$
p known
error 10%
error 30%
error 50%
floor (dashed)
recording probability p
(d)
branching ratio
fitted $\hat{n}''$
$h_{\hat{p}}^{-1}(\hat{n}'')$
theory
true $\bar{n}$
