(a)
fitted $\hat{n}'$ (recorded incidents)
$n = 0.3$
$n = 0.5$
$n = 0.7$
$n' = h_p(n)$
$pn$
recording probability $p$
(b)
corrected $\hat{n}$
$h_p^{-1}(\hat{n}')$, $p$ known
$h_{\hat{p}}^{-1}(\hat{n}')$, $p$ estimated
recording probability $p$
(c)
branching ratio
fitted $\hat{n}''$
$h_{\hat{p}}^{-1}(\hat{n}'')$
theory
true $\bar{n}$
Cov > 0 (0.2,0.8)
$p$ equal (0.5,0.5)
Cov < 0 (0.8,0.2)
$p = 1$ (1,1)
$(p_1, p_2)$, with $(n_1, n_2) = (0.1, 0.9)$
