true par., integrating
true par., no future events
fitted, integrating
fitted, no future events
moving-average (MA) Poisson
climatology
delays: naive state
delays: HT nowcast
delays: MA Poisson, available
best constant rule; (c) surge rate
(a)
complete data
realised cost per window
cost ratio $c_{\text{miss}}/c_{\text{FA}}$
(b)
reporting delays
cost ratio $c_{\text{miss}}/c_{\text{FA}}$
(c)
one point per cost ratio
precision
recall (hit rate)
(d)
all 1800 windows
density
randomised PIT
(e)
true par., integrating, by window
event arrives
(376 windows)
no event
(1424 windows)
randomised PIT
(f)
delays, all windows
randomised PIT
