
(a)
$|\Delta\mu_G| = 0.05$
$|\Delta\mu_G| = 0.1$
$|\Delta\mu_G| = 0.2$
$|\Delta\mu_G| = 0.3$
Sign reversals, index $h = 4$ (%)
SD of uniform DIF on S items, s
(b)
invariance ($s = 0$)
DIF $s = 0.3$, same sign
DIF $s = 0.3$, reversed
Index difference (pct. points)
Latent difference $\Delta\mu_G$
(c)
full invariance, $\Delta\mu_G = 0.2$
$\sigma_G^{(1)} = 0.6$
$\sigma_G^{(1)} = 1.25$
$\sigma_G^{(1)} = 0.8$
$\sigma_G^{(1)} = 1.5$
Index difference (pct. points)
Index threshold h (of 8)
